

# QITCHAIN NETWORK

Qitchain Network is a Web 3.0 infrastructure that provides the ability to store and search data on blockchain network.

[www.qitchain.net](http://www.qitchain.net)

Project Name: Qitchain Network

Coin: Qitcoin

Symbol: QTC

**Qitchain is  
Effective  
Information  
Aggregator,  
generally called  
”Blockchain Google”**

# Core Algorithm

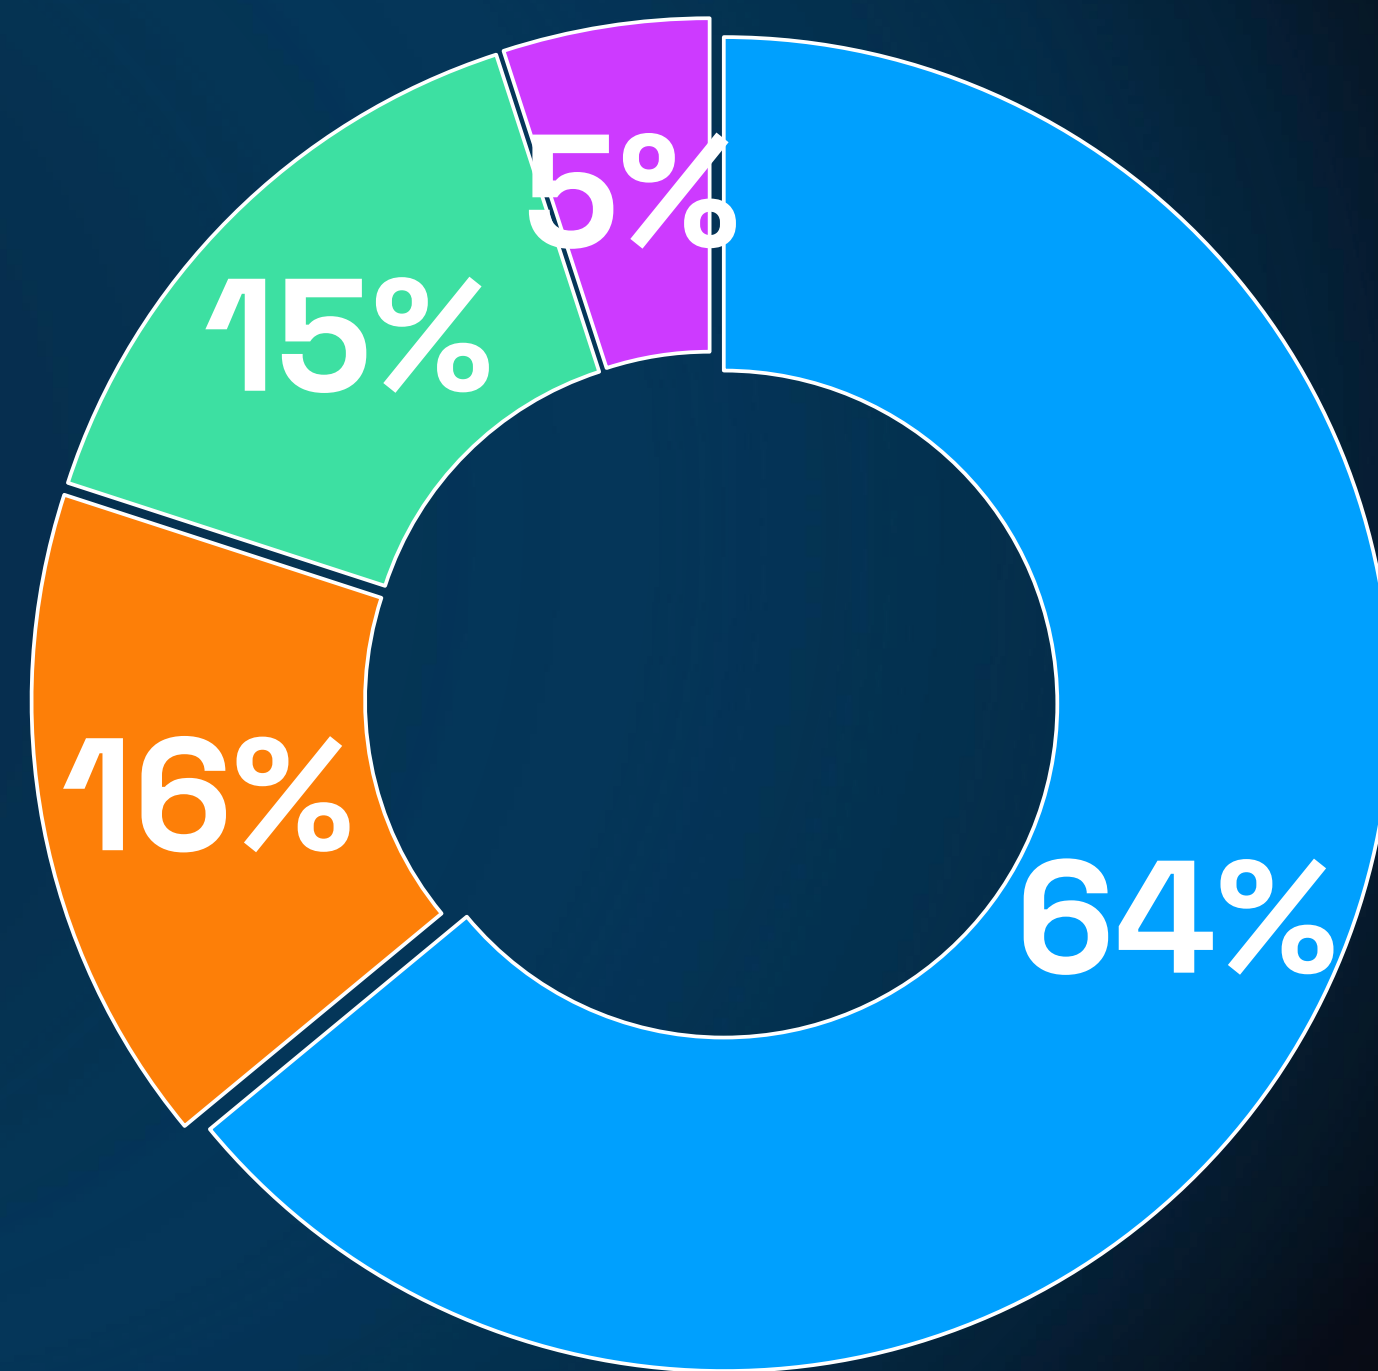

## CPoC

CPoC consensus mechanism (Conditional-Proof of Capacity) is the first in the world on which Qitchain is developed. This mechanism guarantees the healthy development of the entire cryptocurrency by designing a long-term incentive economic model which has raised the bar for other cryptocurrencies. It enables mining devices in the network to determine mining rights and verify transactions.

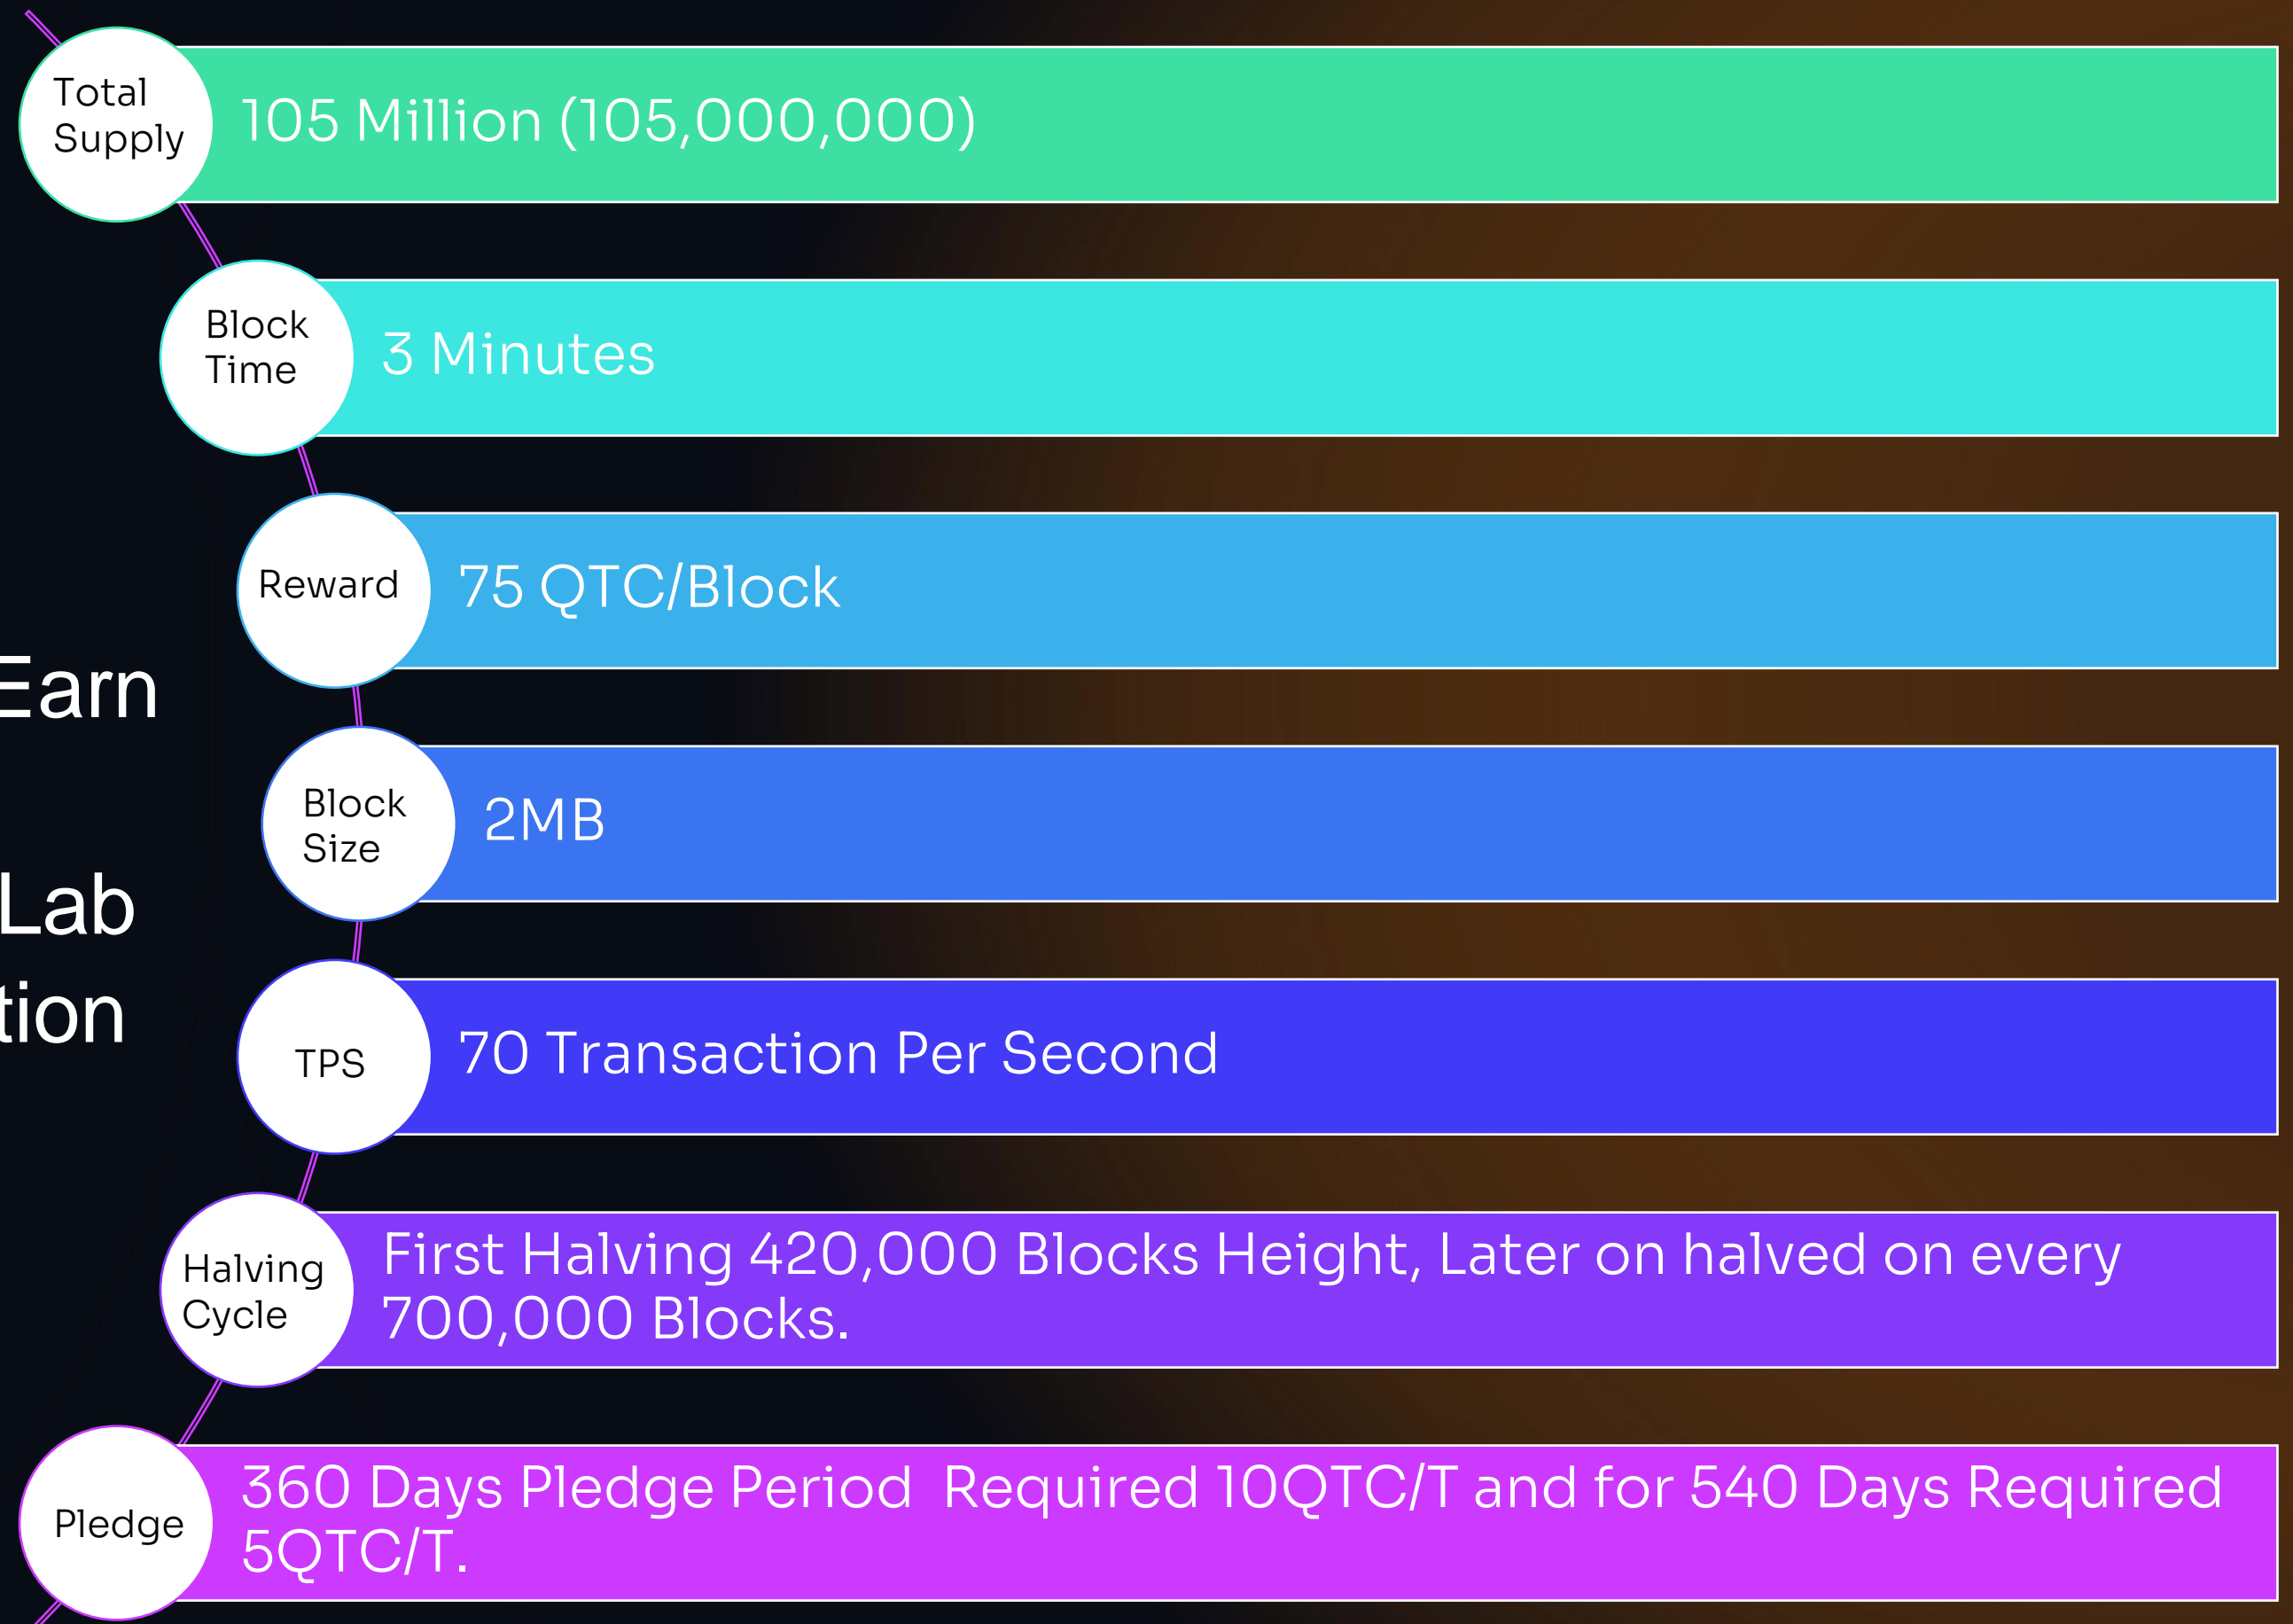

## PoST

Proof of Space-Time (PoSt) is an innovative consensus mechanism that rewards users with native procedure coins for storing data for other users. Proof of Space Time, like Proof of Replication, is component of the Proof of Storage framework of the shared storage network.
